

# CYB TOKEN FLOW CHART

# ①Initiate(issue)

---

- On Cybex initialization, system issued 9,500,000,000 CYB to official account crypto-vault.
- Max-supply of CYB is 10,000,000,000, will not increase.
- Every quarter, 50% of exchange fees will be destroyed.

## ②Investor airdrop & monthly airdrop

---

- Early investors got CYB by the airdrop from crypto-vault.
- March 2018 to February 2020, every month, every account holding CYB will get the airdrop from crypto-vault.

Total airdrop amount is 20,830,000 CYB per month.

## ③Transaction fees deployment - 1

---

- Users need to pay certain CYB as a transaction fee, when exchange assets, transfer assets or any other operations linked to the blockchain.

Rate standard of transaction fees are determined by the committee.

- 20% of the transaction fees will flow into Un-issued CYB pool.

## ③Transaction fees deployment - 2

---

- Users need to pay certain CYB as a transaction fee, when exchange assets, transfer assets or any other operations linked to the blockchain.
- Rate standard of transaction fees are determined by the committee.
- 80% of the transaction fees will distribute to Registrar and Referral.
  - Registrar: earn 50%.
  - Referral: earn 30%.

But if one account has upgraded to a lifetime membership, all the 80% fees will return back to itself.
- Fees paid every maintenance interval (current setting is 86400 seconds). but fees over the vesting threshold must vest for some days as defined by the committee. Currently, the minimum vesting balance is 100 CYB.

## ⑤ Budget & Payment

---

- Every maintenance interval, Un-issued CYB pool will create a budget for witness node and release the payment for the workers according to the approved situation.
- A blockchain parameter (defined by shareholders through the committee) defines the daily available budget & payment, budget for witness nodes has a higher priority. No more than that can be paid at any time to all workers combined.
- For each successfully constructed block, a witness will be paid in shares at a rate that is defined by the shareholders. Cybex blockchain has 11 witness nodes. Every 3 seconds, randomly choose one of the witness nodes to produce a new block, and this witness node will earn  $X$  CYB. (current setting:  $X=0.1$ ).
